DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Masek et al.

There is disclosed in Masek a beverage producing cartridge and method of constructing, including: the production of a plurality of outer members 8, 17, 25 each having a differing shape and configurations; the production of a plurality of inner members 13, 23, 30 each having a differing shape and configuration; the selection of and conjoining, by welding, of one of the plurality of outer members with one of the plurality of inner members; each outer member being filled with a beverage ingredient; and each outer member being sealed with a lid 12, 21, 29 to form a finished cartridge.

In regards to the storing of the outer members and inner members, such is not definitive of a manufacturing step and is therefor not given patentable weight.

Additionally, it is inherently taught that the outer and inner members are stored, at least for some period of time, before they are assembled together.

Application/Control Number: 10/763,908

Art Unit: 1761

In regards to claim 2, the inner members are taught in Masek as having a filtering function.

In regards to the type of beverage ingredient which is contained and filtered by the outer and inner members, such is not definitive of a manufacturing step. But, it is clear from Masek that soluble ingredient is appropriate.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Masek et al.

While Masek only discloses three types of inner and outer members, it would have been obvious to one skilled in the art to produce additional types which would involve a different shape, in order to be usable in various types of coffee makers.

Allowable Subject Matter

Claim 13 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 27 is allowed.

Application/Control Number: 10/763,908

Art Unit: 1761

Response to Arguments

Applicant's arguments filed 23 July 2007 have been fully considered but they are not persuasive. Applicant argues that the prior art fails to disclose that the inner members 13, 23, 30 of Masek are interchangeable. In response to this argument it should be not that elements 13, 23, 30 are designed to perform the same function. In this regard there is no reason to assume that either of the inner members could be used with the various disclosed outer members. It should also be noted that the statement that the inner members are interchangeable is not a limiting to the manufacturing steps claimed. The claims are directed to a method of manufacturing a cartridge. The interchangeable nature of the inner members is not a step of manufacturing.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
